Addendum No. 3

To the

Bid Documents

(plans/drawings)

For the

FRIENDSHIP FOREST WILDLIFE SANCTUARY

PARK RENOVATION

PROJECT

Questions

1. On sheet L-5.1, how much of this is planned to be flooded? I'm trying to determine my limits for pine straw.
2. Is there any seed and straw where pine straw will not be applied? What about outside the trail? Looking at google earth, this is just a creek bottom and it is not much to go off of.
3. Will the WLT mix be hydro seed?
4. Will the area have standing water while we plant or will it be dry enough for us to plant with machines?

Answer:

1. **The site is in a 100 year floodplain, so it's subject to flooding. The wetland area will also have periods of standing water. Only hardwood mulch for the wetland and riparian areas as outlined in the specifications. Pine straw will not work with these plantings.**
2. **The only potential locations are the new parking lot area (perimeter of site, in combination with silt fence) for E&SC issues and small amount near the pavilion and pedestrian bridge installation**
3. **Whether its hydroseed or broadcast seed, this is at the contractor's discretion**
4. **It is expect the plantings of wetland plugs will be in water.- depending on the weather conditions leading up to the plantings.**
